Ash 7.880 per cent. Total 99-999 per cent. From invertebrate fossils gathered from the clay above and below the lignite seams and from plant impressions--and from other geological evidences, the lignite in this county was found to belong to the Laramie formation. Dawson County. Dawson County is the east central county of the state, having Custer and Rosebud Counties on the south and Valley County on the north. It is one of the large counties of Montana having an area of 13,194 square miles. Glendive, in the southeast corner is its county seat. The southeastern corner is crossed by the main line of the Northern Pacific railroad which follows the Yellowstone River. Almost in the center are found Mountain 0-e-i/e. See v 1 Sheep Bluffs, while the other portion of the county is decidedly a prairie country. At least...
